

Soundproof doors

High performance customized solutions

All our products offer the best of Italian design

Soundproof doors with glass central portion and sound-insulation of 40dB. Available in standard or bespoke measures for several uses.

Soundproof doors

High performance customized solutions

Use

Recording studios, rehearsal rooms, broadcasting, medical clinics and studios, hospitals, offices and every kind of room with a specific need of sound-insulation.

Composition

The door has a white PVC frame with high acoustic properties. The door has specific anti-noise double-pane glass. The glass part can be opaque or transparent.

Closure

The closing system with external and internal handles allows a total closure with total adherence to the entire perimeter of the door, even on the ground. Possibility to insert a Yale type locking cylinder.

Threshold on floor

The door has a threshold on the floor for the acoustic insulation all over the perimeter. It is rounded and has a thickness of only 2.5 cm for easy wheelchair access.

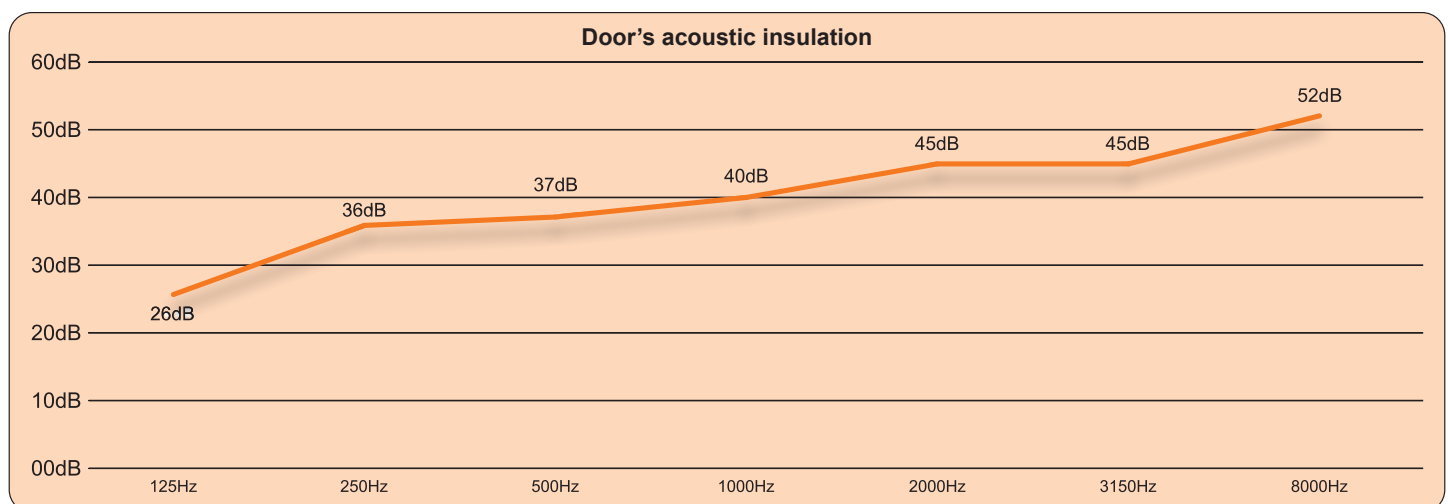

Double door

In rooms with a high insulation, it is recommended to install two doors mirroring each other. In this case the walls of the door compartment need to be at least 20 cm thick.

Dimensions

The doors can be custom-made. Single-leaf doors can be sized up to 95x210h cm. Any special measure can be evaluated. The door's weight is 50 kg/sq.m.

Standard reference: acoustic insulation tested according to the norm ISO 717-1

Optional

- Bespoke sizes
- Opaque glass

Packing and delivery

The door is packed and shipped in a wooden crate. It can be delivered and installed with DIY kit or by our specialized staff if required.

Installation

The door can be installed on any type of wall (masonry or plasterboard). It is necessary to prepare the supports for fixing. The installation can be done following the instructions provided.

Notes

The specifications can be subjected to changes without notice. Warranty: as per law.
